

flood warning

Caloundra flood ALERT network

Caloundra / Australia

project summary

Caloundra is located on Queensland's Sunshine Coast and is subject to seasonal heavy rainfalls and major river flooding. An early flood warning was designed and installed by Greenspan Technology to provide advance warning of flood conditions. The system utilises remote Rainfall and River Stations with a "Real Time Radio Telemetry" system. The network provides flood warnings and forecasts of river flood conditions in conjunction with the Bureau of Meteorology Flood Warning Centre in Brisbane.

project features

- Raised Platform Gas Bubbler River Stations
- Tree style Tipping Bucket Rainfalls
- Real Time "ALERT" Radio Telemetry
- System Design, Installation & Ongoing
- Annual; Servicing by Greenspan.
